

In re Patent Application of:  
ROY  
Serial No. 10/780,258  
Filing Date: February 17, 2004

---

In the Claims:

1. (CURRENTLY AMENDED) A communications system comprising:  
a mobile device having a mail user agent; and  
a mobile office platform operative with the mail user agent for accessing one or more electronic mailboxes of the mail user agent using at least one protocol specific connector, wherein said mobile office platform is operative for providing only the n-most recent mail headers of electronic messages to the mail user agent in a default order of mail headers provided ~~by the~~ by an electronic mail protocol used for accessing an electronic mailbox and if the default order of mail headers cannot be provided, then providing most recent mail headers in an order based on associative information ~~about the~~ about an electronic mail provider and/or electronic mailbox to be accessed, and if associative information cannot be used, then downloading all message headers.

2. (CANCELLED)

3. (ORIGINAL) A communications system according to Claim 1, wherein said message header comprises a unique identifier (UID) of an electronic mail message.

4. (CANCELLED)

5. (PREVIOUSLY PRESENTED) A communications system according to Claim 1, and further comprising a database

In re Patent Application of:  
**ROY**  
Serial No. 10/780,258  
Filing Date: **February 17, 2004**

---

associated with said mobile office platform and containing records of associative information for electronic mail providers and/or electronic mailboxes to be accessed.

6. (PREVIOUSLY PRESENTED) A communications system according to Claim 1, wherein said associative information comprises the name of the electronic mail protocol used for accessing an electronic mailbox.

7. (PREVIOUSLY PRESENTED) A communications system according to Claim 1, wherein said associative information comprises the version of the electronic mail protocol used for accessing an electronic mailbox.

8. (PREVIOUSLY PRESENTED) A communications system according to Claim 1, wherein said associative information comprises the name of the electronic mail server.

9. (ORIGINAL) A communications system according to Claim 8, wherein the name of the electronic mail server is applicable to a specific electronic mail protocol used for accessing an electronic mailbox.

10. (PREVIOUSLY PRESENTED) A communications system according to Claim 1, wherein said associative information comprises the domain name of an internet service provider used for accessing electronic mailboxes.

11. (ORIGINAL) A communications system according to Claim 1, wherein said mobile office platform is operative for

In re Patent Application of:  
**ROY**  
Serial No. 10/780,258  
Filing Date: **February 17, 2004**

---

downloading an entire message list for one or more electronic mailboxes, sorting the message headers, and extracting only the n-most recent mail messages for delivery to a mail user agent that requested electronic mail.

12. (ORIGINAL) A communications system according to Claim 1, wherein said mobile device comprises a wireless device.

13. (ORIGINAL) A communications system according to Claim 1, wherein said mail user agent is operative for accessing the mobile office platform using a POP, IMAP or webmail protocol.

14. (ORIGINAL) A communications system according to Claim 1, wherein said plurality of protocol specific connectors comprise a POP connector for accessing POP mailboxes, an IMAP connector for accessing IMAP mailboxes, or a connector for accessing mail from an Exchange server.

15. (CURRENTLY AMENDED) A communications system comprising:

a server having a mail agent for accessing one or more electronic mailboxes of a mail user agent using at least one protocol specific connector; and

a database associated with the mail agent and containing associative information about an electronic mail provider and/or electronic mailbox relating to the order in which mail headers are stored and/or retrieved from the electronic mailbox, wherein said mail agent is operative for providing

In re Patent Application of:  
**ROY**  
Serial No. 10/780,258  
Filing Date: **February 17, 2004**

---

only the n-most recent mail headers of electronic messages to a mail user agent of a mobile device in a default order of mail headers provided ~~by the~~ by an electronic mail protocol used for accessing an electronic mailbox and if the default order of mail headers cannot be provided, then providing most recent mail headers in an order based on associative information ~~about the~~ about an electronic mail provider and/or electronic mailbox to be accessed, and if associative information cannot be used, then downloading all message headers.

16. (CANCELLED)

17. (CANCELLED)

18. (ORIGINAL) A communications system according to Claim 15, wherein said message header comprises a unique identifier (UID) of an electronic mail message.

19. (ORIGINAL) A communications system according to Claim 15, wherein said associative information comprises the name of the electronic mail protocol used for accessing an electronic mailbox.

20. (ORIGINAL) A communications system according to Claim 15, wherein said associative information comprises the version of the electronic mail protocol used for accessing an electronic mailbox.

Filing Date: **February 17, 2004**

---

21. (ORIGINAL) A communications system according to Claim 15, wherein said associative information comprises the name of the electronic mail server.

22. (ORIGINAL) A communications system according to Claim 21, wherein the name of the electronic mail server is applicable to a specific electronic mail protocol used for accessing an electronic mailbox.

23. (ORIGINAL) A communications system according to Claim 15, wherein said associative information comprises the domain name of an internet service provider used for accessing electronic mailboxes.

24. (ORIGINAL) A communications system according to Claim 15, wherein said mobile agent is operative for downloading an entire message list for one or more electronic mailboxes, sorting the message headers and extracting only the n-most recent mail messages for delivery to a mail user agent that requested electronic mail.

25. (ORIGINAL) A communications system according to Claim 15, wherein a mail user agent is operative for accessing the mail agent using a POP, IMAP or webmail protocol.

26. (ORIGINAL) A communications system according to Claim 15, wherein said plurality of protocol specific connectors comprise a POP connector for accessing POP mailboxes, an IMAP connector for accessing IMAP mailboxes, or a connector for accessing mail from an Exchange server.

---

27. (CURRENTLY AMENDED) A method of retrieving electronic mail comprising the steps of:

accessing one or more electronic mailboxes of a mail user agent using at least one protocol specific connector; and

providing to the mail user agent only the n-most recent mail headers of electronic mail messages that had been accessed in a default order of mail headers provided ~~by the~~ by an electronic mail protocol used for accessing an electronic mailbox and if the default order of mail headers cannot be provided, then providing most recent mail headers in an order based on associative information ~~about the~~ about an electronic mail provider and/or electronic mailbox to be accessed, and if associative information cannot be used, then downloading all message headers.

28. (CANCELLED)

29. (ORIGINAL) A method according to Claim 27, wherein said message header comprises a unique identifier of an electronic mail message.

30. (CANCELLED)

31. (PREVIOUSLY PRESENTED) A method according to Claim 27, and further comprising the step of storing associative information within a database.

32. (PREVIOUSLY PRESENTED) A method according to Claim 27, wherein said associative information comprises the name of

In re Patent Application of:  
**ROY**  
Serial No. 10/780,258  
Filing Date: **February 17, 2004**

---

the electronic mail protocol used for accessing an electronic mailbox.

33. (PREVIOUSLY PRESENTED) A method according to Claim 27, wherein said associative information comprises the version of the electronic mail protocol used for accessing an electronic mailbox.

34. (PREVIOUSLY PRESENTED) A method according to Claim 27, wherein said associative information comprises the name of the electronic mail server.

35. (ORIGINAL) A method according to Claim 34, wherein the name of the electronic mail server is applicable to a specific electronic mail protocol used for accessing an electronic mailbox.

36. (PREVIOUSLY PRESENTED) A method according to Claim 27, wherein said associative information comprises the domain name of an internet service provider used for accessing electronic mailboxes.

37. (ORIGINAL) A method according to Claim 27, and further comprising the step of downloading an entire message list for one or more electronic mailboxes, sorting the message headers and extracting only the n-most recent mail messages for delivery to the mail user agent.
